

Claims

1. Disposal diaper (2) in particular for incontinent care, with a hip belt (4) forming a peripherally closed hip opening of the diaper which can be opened and closed at a least one location and with a main diaper portion (6) having a front region (8), a rear region (12) and an intermediate crotch region (10) as well as a layer (14) facing away from the patient which is impermeable to liquids (back sheet), a layer facing the body which is permeable to liquids (top sheet) and an absorptive body for body fluids, wherein the main diaper portion (6) can be attached to the hip belt (4) in a detachable fashion at the longitudinal end (18) of its front region (8) or of its rear region (12) via first closing means (20) in such a fashion that a user, with the hip belt (4) applied, can raise the main diaper portion (6) between the legs and attach the free longitudinal end of the main diaper portion (6) to the hip belt (4) in a detachable fashion, characterized in that, in addition to the first closing means (20) disposed between the hip belt (4) and the longitudinal end (18) of the main diaper portion (16), longitudinally extended second closing means (26) are also provided for which can effect a first holding connection between the hip belt (4), at one end, and the front region (8) or the crotch region (10) of the main diaper portion (6), at the other end, and which are disposed in such a fashion that a user, after loosening the first closing means (20), can fold or open the front region (8) of the main diaper portion (6) away from the hip belt (4).

2. Disposable diaper according to claim 1, characterized in that the second closing means (26) have a length of 10 to 50 cm, in particular 10 to 40 cm, and in particular 15 to 35 cm.
3. Disposable diaper according to claim 1 or 2, characterized in that the second closing means (26) have a width transverse to their longitudinal extent of between 0.5 and 8 cm, in particular between 0.5 and 6 cm, in particular between 0.5 and 5 cm, in particular between 0.5 and 4 cm, and in particular between 0.5 and 3 cm.
4. Disposable diaper according to claim 1, 2 or 3, characterized in that the second closing means (26) extend approximately in a V-shaped manner with respect to each other in the applied state of the diaper.
5. Disposable diaper according to any one or more of the preceding claims, characterized in that the second closing means (26) are elastically stretchable.
6. Disposable diaper according to any one or more of the preceding claims, characterized in that the second closing means (26) are permanently connected at one side to the hip belt (4) during proper use and are detachably connected to the main diaper portion at the other end thereof.
7. Disposable diaper according to any one or more of the preceding claims, characterized in that the second closing means (26) are permanently connected at one end to the main diaper portion (6)

during proper use and are detachably connected to the hip belt (4) on the other end thereof.

8. Disposable diaper according to any one or more of the preceding claims, characterized in that the second closing means (26) have ends which are attached, in particular in a permanent manner, to the hip belt (4) and to the main diaper portion (6) and have a closeable detachable connection along their longitudinal extent.
9. Disposable diaper according to any one or more of the preceding claims, characterized in that the first and/or the second closing means (20 or 26) have mechanically acting closing elements or glued regions.
10. Disposable diaper according to any one or more of the preceding claims, characterized in that the second closing means (26) can be closed by means of pre-positioned, opposing closing elements or regions on the main diaper portion (6) or on the hip belt (4).
11. Disposable diaper according to any one or more of the preceding claims, characterized in that the second closing means (26), when presented to the user or customer in particular in a packaged state prior to use, are folded in a pleated manner.
12. Disposable diaper according to any one or more of the preceding claims, characterized in that the second closing means (26), upon presentation to the customer in particular in a packaged state prior to use, are disposed or extended along the hip belt (4).

13. Disposable diaper according to any one or more of the preceding claims, characterized in that the second closing means (26), upon presentation to the customer in particular in a packaged state prior to use, are disposed on the liquid impermeable layer.
14. Disposable diaper according to any one or more of the preceding claims, characterized in that the second closing means (26), upon presentation to the customer in particular in a packaged state and prior to use, are associated with the hip belt (4) or the main diaper portion (6) in such a fashion that they can be left unused in this state without interference.
15. Disposable diaper according to one or more of the preceding claims, characterized in that the second closing means (26), upon presentation to the customer in particular in a package state prior to use, are covered.
16. Disposable diaper according to one or more of the preceding claims, characterized in that the hip belt (4) is permanently mounted to the rear region (12) of the main diaper portion (6).
17. Disposable diaper according to one or more of the preceding claims, characterized in that the hip belt (4) is integral with the rear region (12) of the main diaper portion (6).
18. Disposable diaper according to any one or more of the preceding claims, characterized in that the hip belt (4) is attached in a

permanent fashion to the liquid impermeable layer of the main diaper portion (6).

19. Disposable diaper according to any one or more of the preceding claims, characterized in that the hip belt (4) is configured in the peripheral direction as one continuous piece.
